1. In Excel, the following mouse pointer will allow us to

1 / 1 point

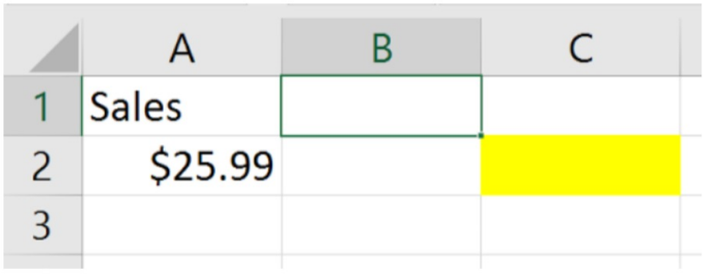

- (•) Move data
- ( ) Delete data
- ( ) Select data
- ( ) Copy data

✓ **Nice work**

Yes, exactly right. With this mouse pointer you can conveniently move data from one location to another.

2. In the following graphic, which is the **Active Cell**?

1 / 1 point

- ( ) A2
- ( ) A1
- (•) B1
- ( ) C2

✓ **Nice work**

Yes, spot on! An active cell is easy to spot by looking for the green border and the little solid square in the bottom right-hand corner. This is called the fill handle and we will look at this in one of the videos this week.

3. To select the whole of column **B**, we ...

1 / 1 point

- ( ) Click **File**, Select **Column**
- ( ) Click and drag from **B1** down to **B1000**
- ( ) Double-click on the cell **B1**
- (•) Click on **B**

✓ **Nice work**

Yes, that's a super-easy way of selecting an entire column.

4. What is the shortcut key to select all the data in a data block?

1 / 1 point

- ( ) Ctrl+F
- ( ) Ctrl+O
- ( ) Ctrl+Home
- (•) Ctrl+A

✓ **Nice work**

Yes, that's correct. A good way to remember is that A stands for All.

5. How do we select two blocks of data that are not next to each other (non-contiguous)?

1 / 1 point

- ( ) Hold down the **Ctrl** key (**Cmd** on Mac), select the first block, and then still holding **Ctrl**, select the second block.
- ( ) Select the first block, hold down the **Shift** key and select the second block.
- (•) Select the first block, hold down the **Ctrl** key (**Cmd** on Mac) and select the second block.
- ( ) Hold down the **Shift** key, select the first block, and then still holding **Shift**, select the second block.

✓ **Nice work**

Yes, that's correct. The **Ctrl** key helps you to select non-contiguous data.
